

Problem Set 4

Lilly Kirby-Rivera

February 20, 2024

1. The data source I am most interested in scraping at the moment is the NIH RePORTER API (<https://api.reporter.nih.gov/>), which contains information on clinical trials and their total costs and funding. This was a resource I planned to use for my term paper last semester, but never got around to due to limitations on the sample of my other data. Aside from that, I would like to scrape legal records on Paragraph IV filing pharmaceutical cases, but I do not know of any free access legal databases.
2. **Q5 Part D.** The date variable is a character.
3. **Q5 Part E.** You can use the *head()* command to display the first n rows, where n goes in the command.
